UKHSA publishes travel-associated infections report

Case numbers of selected travel-associated infections reported in England, Wales and Northern Ireland: January to June 2025

The UK Health Security Agency (UKHSA) have [published their latest report](#) summarising case numbers of selected travel-associated infections reported in England, Wales and Northern Ireland (EWNI) [1].

The current report includes detailed information on the trends of [chikungunya](#), [cholera](#), [dengue](#), rickettsial infections and [Zika virus disease](#) between January and June 2025. An infection summary and key findings are provided for [Japanese encephalitis](#), [Oropouche virus disease](#) and [yellow fever](#) [1].

The report showed [1]:

- An increase in chikungunya with a total of 73 cases reported between January and June 2025 compared with 27 cases for the same period in 2024.
- Oropouche virus disease was reported for the first time in EWNI. The three imported cases were all linked to travel to Brazil.
- Reports of dengue and Zika virus disease in EWNI were lower in the first six months of 2025 compared with the same period in 2024.
- Eight travel-associated cholera cases were reported, compared with one case for the same period in 2024.
